15" ICE MAKER **DETAILED PLANNING DIMENSIONS GUIDE**

OPENING/CLEARANCE DIMENSIONS

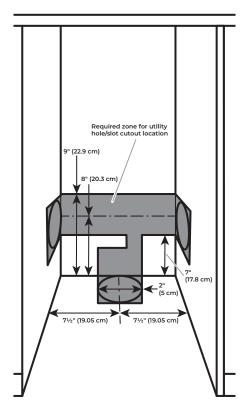

LOCATION REQUIREMENTS

To ensure proper ventilation for your ice maker, the front side must be completely unobstructed. The ice maker may be closed in on the top and three sides, however the installation should allow the ice maker to be pulled forward for servicing if necessary.

Floor must be able to support the ice maker's total weight, of more than 106 lbs (48.08 kg), including door panels and contents of the ice maker. It is important for the ice maker to be level in order to work properly. If needed, you can adjust the height of the ice maker by changing the height of the leveling legs.

Check that the power supply cord, water supply line, and drain line (on some models) are not damaged, pinched, or kinked between the ice maker and the cabinet.

- This ice maker has been designed for flush install in instances where the power supply, water supply, and drain are located in a cabinetry.
- For installation of product with utilities behind the ice maker, flush install may not be achieved.
- Refer illustration and table below for utility slot/hole cutout location.

Because Whirlpool Corporation policy includes a continuous commitment to improve our products, we reserve the right to change materials and specifications without notice.

Dimensions are for planning purposes only. For complete details, see Installation Instructions packed with product. Specifications subject to change without notice.

ELECTRICAL REQUIREMENTS

AWARNING

Electrical Shock Hazard

Plug into a grounded 3 prong outlet.

Do not remove ground prong.

Do not use an adapter.

Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

115 V, 60 Hz, AC only, 15 A or 20 A fused, grounded circuit is required. A dedicated circuit is recommended. Use an outlet that cannot be turned off by a switch. Do not use an extension cord.

WATER SUPPLY REQUIREMENTS

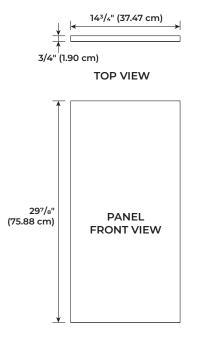

A cold water supply with water pressure between 30 psi and 120 psi (207 kPA and 827 kPa) is required to operate the ice maker. Call a licensed, qualified plumber with any questions about the water pressure.

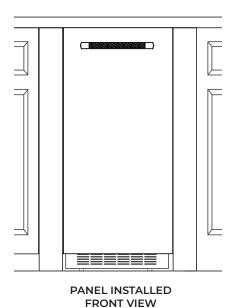

Reverse Osmosis Water Supply

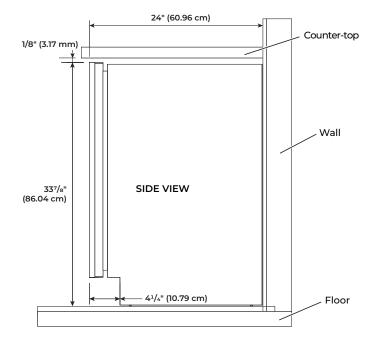

A reverse osmosis system may be used if the water pressure from the filtration system meets the required water pressure requirements.

If a reverse osmosis system is desired, only a whole-house capacity reverse osmosis system, capable of maintaining the steady water supply required by the ice maker, is recommended. Faucet capacity reverse osmosis systems are not able to maintain the steady water supply required by the ice maker.

WOOD PANEL GUIDE

- Overlay panel thickness is 3/4" (1.90 cm).
- Panel dimensions shown are the minimum size to cover the appliance door.
- Panels can be made taller/wider to match surrounding cabinetry.
- Maximum door swing with factory installed hinge stop is 90 degrees.
- Leveler legs provide a maximum 1" (2.54 cm) of lift.
- Minimum opening height: 34" (86.36 cm). This produces a
 - 1/8" (3.17 mm) reveal above the panel.
- Countersink all the handle mounting hardware.
