Overlay Door Panel Dimensions - ML15CRP1XP

OVERLAY PANEL

NOTICE

Due to differences in surrounding cabinetry the panel may not perfectly align with door. The procedure below is designed to provide a finished overlay panel that seamlessly integrates with surrounding cabinetry.

The door panel must not weigh more than 20 lbs (10 kg).

It is important to ensure that all drilled holes are drilled to the correct depth in order to avoid splits in the wood when hardware is installed.

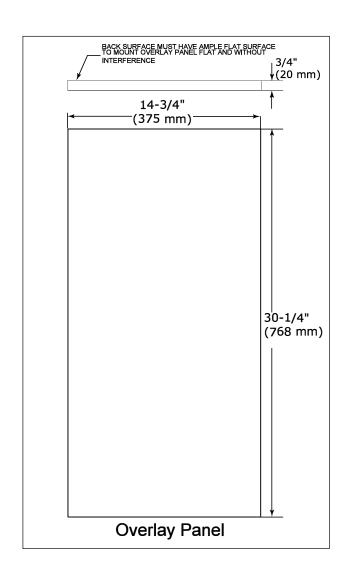

When applying an overlay panel to a unit, ensure that both sides are finished in order to prevent warping.

A full overlay door panel completely covers the door frame and provides a built-in appearance.

Overlay Panel Preparation

- Cut the panels to the dimensions listed in the diagram below.
- Optional: Stain or Finish panel to desired stain or color. Be sure to closely follow the instructions provided by the manufacturer.
- 3. Optional: Install handles and hardware.

INTEGRATED PANEL INSTALLATION

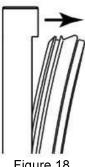

Panel Installation

3/4" (20 mm) panel

1415/4" (379 mm) width

30" (762 mm) height

- Fully open door.
- Starting at corner, pull gasket away from door.
- Continue to pull gasket free from gasket channel.

- Figure 18
- Upon removal, lay gasket down on a flat surface.
- Align top of panel with top edge of door. Center panel on door.

NOTE

Due to differences in floor construction or surrounding cabinetry, the panel may not sit flush with the top of the door.

- Secure integrated panel to door using clamps. A robust tape may also be used. Marvel recommends the use bar clamps to secure the panel to the door. If using tape, be certain the tape will not damage panel finish upon removal.
- Using a 7/64" (3 mm) drill bit, drill 6 pilot holes into the wood panel 1/2" (12 mm) deep using the holes in the door frame as a guide.

NOTE

It is important to ensure that all drilled holes are drilled to the correct depth in order to avoid splits in the wood when hardwood is installed.

8. Locate 6 of the #6x 1-1/2" (38 mm) screws provided with your unit.

- Using a Phillips screwdriver, place one screw into each of the 6 pilot holes and screw down. Do not overtighten screws.
- 10. Ensure the screws sit flush against the bottom of the channel.

11. Remove clamps from door.

NOTE

If panel requires additional adjustment after removing clamps, slightly loosen each screw and adjust panel as necessary. Tighten screws upon completion.

12. Starting at the corners, re-install the gasket into the gasket channel in the frame. Make sure the gasket is fully seated.
