IMPORTANT SAFETY INSTRUCTIONS

READ AND SAVE THESE INSTRUCTIONS

This appliance complies with current safety requirements. Improper use of the appliance can lead to personal injury and material damage.

Read all instructions before installing or using the appliance for the first time. Only use the appliance for its intended purpose.

Keep these operating instructions in a safe place and pass them on to any future user.

Appropriate use

- ▶ **CAUTION:** For General Ventilating Use Only. Do Not Use To Exhaust Hazardous Or Explosive Materials And Vapors.
- ▶ This appliance is intended for residential use only. Use only as described in these operating instructions.
- ▶ This ventilation hood is not intended for outdoor use.
- ▶ It must only be used to extract and clean vapors produced during cooking. Any other use occurs at the owner's own risk.
- ▶ This appliance is suitable for installation above electric cooking surfaces. Safety regulations prohibit the installation of a ventilation hood over gas cooktops.
- ▶ Persons who lack physical, sensory or mental abilities, or experience with the appliance should not use it without supervision or instruction by a responsible person.

IMPORTANT SAFETY INSTRUCTIONS

Safety with children

- ▶ Children must be kept away from the ventilation hood unless they are constantly supervised.
- ▶ Children must not be allowed to clean or service the hood.
- ▶ Please supervise children in the vicinity of the hood and do not let them play with it.
- ▶ The LED ClearView lighting is very intense.
Avoid looking directly into the light for prolonged periods of time.
- ▶ Danger of suffocation! Ensure that any plastic wrappings, bags, etc. are disposed of safely and kept out of the reach of children.

IMPORTANT SAFETY INSTRUCTIONS

Technical safety

- ▶ **WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:**
- Use this appliance only in the manner intended by the manufacturer. If you have questions, contact Miele.
 - Before servicing or cleaning the appliance, switch power off at the service panel and lock the service disconnecting means to prevent power from being switched on accidentally. If the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
- ▶ Installation, repair and maintenance work should be performed by a Miele authorized service technician in accordance with national and local safety regulations and the provided installation instructions. Contact Miele's Technical Service Department for examination, repair or adjustment. Repairs and other work by unauthorized persons could be dangerous and may void the warranty.
- ▶ A damaged ventilation hood can be dangerous. Always check for visible signs of damage. Never use a damaged ventilation hood.
- ▶ Be certain your appliance is properly installed and grounded by a qualified technician. To guarantee the electrical safety of this appliance, continuity must exist between the appliance and an effective grounding system. It is imperative that this basic safety requirement be met. If there is any doubt, have the electrical system of the house checked by a qualified electrician.

IMPORTANT SAFETY INSTRUCTIONS

▶ Temporary or permanent operation on an autonomous power supply system or a power supply system that is not synchronized with the grid power supply (e.g., island networks, back-up systems) is possible. A prerequisite for operation is that the power supply system complies with national and local codes.

The function and operation of the protective measures provided in the domestic electrical installation and in this Miele product must also be maintained in isolated operation or in operation that is not synchronized with the grid power supply, or these measures must be replaced by equivalent measures in the installation.

▶ To avoid damaging the ventilation hood, make sure that the connection data (voltage and frequency) on the data plate correspond to the building's power supply before connecting the appliance.

If in doubt, consult a qualified electrician.

▶ Do not use a power bar or extension cord to connect the ventilation hood to electricity. These are a fire hazard and do not guarantee the required level of appliance safety.

▶ To ensure safe operation, only use the ventilation hood after it has been properly installed.

▶ This ventilation hood may not be used in non-stationary locations (e.g. on a ship).

▶ Adequate ventilation must be provided when the hood is operated simultaneously with devices that burn gas or other fuels.

▶ Only open the housing as described in the enclosed "Installation diagram" and in the "Cleaning and care" section of this manual. Under no circumstances should any other parts of the housing be opened.

Tampering with electrical connections or components and mechanical parts is highly dangerous to the user and can cause operation faults.

IMPORTANT SAFETY INSTRUCTIONS

- ▶ If the power cord is damaged, it must only be replaced by a qualified service technician.
- ▶ During installation, maintenance, and repair work, the ventilation hood must be disconnected from the electrical supply. It is only completely isolated from the electricity supply if one of the following applies:
 - The circuit breakers on the electrical service panel are tripped.
 - The screw-type fuses on the electrical service panel have been removed.
 - The power cord (if present) has been unplugged from the socket (pull the plug not the cord).

IMPORTANT SAFETY INSTRUCTIONS

Correct use

- ▶ **WARNING: TO REDUCE THE RISK OF A COOKTOP GREASE FIRE:**
 - a) Never leave surface units unattended at high settings. Boilovers cause smoking and greasy spillovers may ignite. Heat oils slowly on low or medium settings.
 - b) Always turn the hood on when cooking at a high heat.
 - c) Clean the ventilation hood frequently. Grease should not be allowed to accumulate on the fan or filter.
 - d) Use the proper pan size. Always use cookware appropriate for the size of the cooking area.

- ▶ Open flames are a fire hazard.

The use of an open flame under the ventilation hood is not permitted. To avoid the danger of fire, do not flambé or grill over an open flame. When switched on, the ventilation hood could draw flames into the filter. Fat deposits could ignite, presenting a fire hazard.

- ▶ **WARNING: TO REDUCE THE RISK OF INJURY TO PERSONS IN THE EVENT OF A COOKTOP GREASE FIRE, OBSERVE THE FOLLOWING*:**

- a) **SMOTHER FLAMES** with a close fitting lid, cookie sheet, or metal tray then turn off the burner. **BE CAREFUL TO PREVENT BURNS.** If the flames do not go out immediately, **EVACUATE AND CALL THE FIRE DEPARTMENT.**
- b) **NEVER PICK UP A FLAMING PAN** - You may be burned.
- c) **DO NOT USE WATER**, including wet dishcloths or towels - a violent steam explosion will result.
- d) Use a fire extinguisher **ONLY** if:
 - 1) You have a class ABC extinguisher, and you know how to operate it.
 - 2) The fire is small and contained in the area where it started.
 - 3) The fire department is being called.
 - 4) You can fight the fire with your back to an exit.

*Based on “Kitchen Fire Safety Tips” published by NFPA.

IMPORTANT SAFETY INSTRUCTIONS

▶ Always turn the ventilation hood on whenever a burner is in use to prevent damage from condensation.

▶ Overheated oil and fat can ignite, causing fire damage to the ventilation hood.

Do not leave cookware, pans, and deep-fat fryers unattended when cooking with oil or fat. Similarly, never leave an open flame unattended when grilling.

▶ Fat and debris deposits impair the proper functioning of the ventilation hood.

To ensure that cooking vapors are properly cleaned, never use the ventilation hood without the grease filters in place.

▶ Please note that the heat rising from the stovetop during cooking can cause the ventilation hood to become very hot.

Do not touch the housing or the grease filters until the ventilation hood has cooled down.

IMPORTANT SAFETY INSTRUCTIONS

Proper installation

- ▶ **WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:**
 - a) Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
 - b) Sufficient air is needed for combustion and exhausting of gases through the flue (chimney of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA) and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and the local code authorities.
 - c) When cutting or drilling into the wall or ceiling, do not damage electrical wiring and other hidden utilities.
 - d) Ducted hoods must always be vented to the outdoors.
 - e) Do not use this hood with any solid-state speed control device.
- ▶ To determine whether a ventilation hood may be operated above your cooking appliance, please refer to the information provided by the appliance's manufacturer.
- ▶ Safety regulations prohibit the installation of a ventilation hood over solid fuel stoves.
- ▶ Safety regulations prohibit the installation of a ventilation hood over a gas cooktop.

IMPORTANT SAFETY INSTRUCTIONS

- ▶ An insufficient safety distance between the cooktop and the ventilation hood can result in damage to the ventilation hood. The minimum safety distances between the top of the cooktop and the bottom of the ventilation hood given in the “Installation” section of this manual must be observed, unless the cooktop manufacturer states that a greater safety distance is required. If more than one cooking appliance is installed beneath the ventilation hood, and they have different minimum safety distances to the ventilation hood, select the greater distance.
- ▶ The information provided in “Installation” must be observed when installing the ventilation hood.
- ▶ Components can have sharp edges which may cause injury. Wear gloves to protect your hands.
- ▶ When installing the exhaust duct, only use pipes or tubes made of non-flammable material. These can be obtained from your Miele dealer or from Miele Technical Service. Always observe local building code requirements when selecting duct material.
- ▶ Exhaust air should not be vented into a chimney or vent flue which is otherwise in use and should not be channeled into ducting which ventilates rooms with fuel-burning installations.
- ▶ If exhaust air is to be extracted into a chimney or ventilation duct no longer used for other purposes, seek professional advice.
- ▶ **WARNING: TO REDUCE THE RISK OF FIRE USE ONLY METAL DUCTWORK.**

IMPORTANT SAFETY INSTRUCTIONS

Cleaning and maintenance

- ▶ There is a risk of fire if cleaning is not completed according to the instructions in this manual.
- ▶ Never use a steam cleaner to clean the ventilation hood. The steam can reach the electrical components and cause a short circuit.

Accessories and parts

- ▶ Use only genuine original Miele parts. If parts or accessories from other manufacturers are used, the warranty may become void.
- ▶ Defective components should be replaced by Miele original parts only. Only with these parts can safety of the appliance be assured as intended by the manufacturer.
- ▶ Miele will guarantee to supply functional parts for a minimum of 10 years and up to 15 years following the discontinuation of your ventilation unit.

Caring for the environment

Disposal of the packing material

The cardboard box and packing materials protect the appliance during shipping. They have been designed to be biodegradable and recyclable.

Ensure that any plastic wrappings, bags, etc. are disposed of safely and kept out of the reach of children.
Danger of suffocation!

Disposal of your old appliance

Electrical and electronic appliances contain valuable materials. They also contain certain substances, compounds and components which were essential for the proper functioning and safe use of the equipment. Handling these materials improperly by disposing of them in your household waste can be harmful to your health and the environment. Therefore, please do not dispose of your old appliance with regular household waste and follow local regulations on proper disposal.

Consult with local authorities, dealers or Miele in order to dispose of and recycle electrical and electronic appliances. Miele assumes no responsibility for deleting any personal data left on the appliance being disposed. Please ensure that your old appliance is kept away from children until removal. Observe safety requirements for appliances that may tip over or pose an entrapment hazard.

Guide to the ventilation hood

Guide to the ventilation hood

- ① Pull-out canopy
- ② Grease filter
- ③ Controls
- ④ Overhead lighting
- ⑤ Vent collar
- ⑥ Charcoal filters
Optional accessories for recirculation mode
- ⑦ Control for switching the lighting on and off and for dimming the lighting
- ⑧ Control for switching the blower on and off
- ⑨ Controls for setting the blower power
- ⑩ Control for the delayed shutdown function
- ⑪ Control for the filter saturation indicator

The following functions are available on your ventilation hood, depending on the model:

Extraction mode

The air is drawn in and cleaned by the grease filters and directed outside.

daif0494a

Recirculation mode

Recirculation mode hoods require a recirculation kit and OdorFree Charcoal Filters (available as optional accessories), see “Technical Data” for more information.

The air is drawn in and cleaned first by the grease filters and then by the charcoal filters. The clean air is then recirculated back into the kitchen.

daif0494b

Before using for the first time

Selecting extraction mode or recirculation mode

The ventilation hood can be operated with either extraction mode or recirculation mode. The power of the blower is adapted to suit the selected mode of operation. The ventilation hood is set up at the factory for recirculation mode. The ventilation hood has to be reset for extraction mode.

To reset it for extraction mode, the filter saturation indicator for the charcoal filter(s) has to be deactivated.

- Switch off the blower and the lighting.
- Press the + control and the operating-hours control   at the same time.

The charcoal filter symbol  and one of the blower power level indicators will flash.

- Press and hold the + control until the **B** indicator starts to flash.
- Confirm the selection by pressing the operating-hours control  .

All the indicator lights will go out.

Extraction mode has now been set.

If the selection is not confirmed within 4 minutes, the system will revert to the previous setting.

Setting up Miele@home

Required:

- a WiFi network
- the Miele app
- a Miele user account. You can create a user account via the Miele app.

Your ventilation hood is equipped with an integrated WiFi module. Connect the ventilation hood to your household WiFi network. You will then be able to operate the ventilation hood via the Miele app.

If your Miele cooktop is connected to a home WiFi network, you can control the ventilation hood automatically via the Con@ctivity function.

Before installing the ventilation hood in its final location, ensure that the signal of your WiFi network is strong enough.

You can connect to the household WiFi network via the Miele app or via WPS.

Before using for the first time

Miele@home availability

The ability to use the Miele app depends on the availability of the Miele@home service in your country.

The Miele@home service is not available in every country.

For information about availability, please visit www.miele.com.

Miele App

The Miele App is available to download free of charge from the Apple App Store® or from the Google Play Store™.

Connecting via the app

The Miele app can be used to connect to your network.

- Install the Miele app on your mobile device.

To log in you will need:

1. your WiFi network password
2. your ventilation hood password

The password for your ventilation hood consists of the last 9 digits of the serial number. This can be found on the appliance's data tag.

The data plate is located on the housing of the ventilation hood and is visible when the cover for the charcoal filters is removed.

- Start signing the appliance on in the app. Follow the signing in instructions.

If requested to activate WiFi on the ventilation hood, proceed as follows:

Before using for the first time

- Switch the ventilation hood off.

- Press and hold the + control.

- Press the lighting control  at the same time.

2 will light up constantly, **3** will flash on and off.

The ventilation hood will be ready for connection in the next 2 minutes.

- Follow the instructions in the app.

When successfully connected, **2** and **3** will light up constantly.

- Exit connection mode on the ventilation hood by pressing the delayed shutdown control .

The ventilation hood can now be operated via the app.

Connecting via WPS

Your WiFi router must support WPS (WiFi Protected Setup).

- Switch the ventilation hood off.

- Press and hold the + control.

- Press the lighting control  at the same time.

2 will light up constantly, **3** will flash on and off.

The WiFi connection must be started on the ventilation hood at the same time as on the WiFi router.

- Press the + control on the ventilation hood after a few seconds.

After a short while, **2** will light up constantly, and **3** and **B** will flash on and off.

The ventilation hood is ready for connection in the next two minutes.

Before using for the first time

- Start the WiFi connection on your router.

When successfully connected, **2** and **3** will light up constantly.

- Exit connection mode on the ventilation hood by pressing the delayed shutdown control **5/15**.

The ventilation hood can now be operated via the app.

If the connection fails, you have probably not connected WPS to your router quickly enough. Repeat the steps above.

Tip: If your WiFi router does not support WPS, please connect via the Miele app.

Signing out of WiFi (reset to factory settings)

To set up a new WiFi connection, the existing WiFi connection must be disconnected.

- Switch the ventilation hood off.

- Press and hold the **-** control.

- Touch the lighting control **☀** at the same time.

With an existing WiFi connection, **2** and **3** will light up constantly.

The ventilation hood will be ready for disconnection in the next 2 minutes.

Before using for the first time

- Touch the — control.

2 will light up constantly, **3** will flash on and off.

After a few seconds, **2** and **3** will flash on and off. The connection has now been disconnected.

- Exit disconnection mode on the ventilation hood by pressing the delayed shutdown control ⁵15.

The WiFi connection has now been disconnected. A new connection can now be set up.

Setting up Con@ctivity

Con@ctivity is the direct communication system between an induction Miele cooktop and a Miele ventilation hood. It enables the ventilation hood to operate automatically depending on the operational state of a Miele cooktop with onset controls.

- When a burner is turned on, the overhead lighting on the hood turns on automatically. After a brief delay, the ventilation hood blower also comes on.
- The ventilation hood selects the power setting automatically during cooking. The power level selected by the ventilation hood depends on the number of cooking zones being used and their power levels.
- After switching the cooktop off, the blower and the overhead lighting will switch off automatically after a specified period of time.

Detailed information about this function can be found under “Operation”.

Before using for the first time

Con@ctivity via the home WiFi network (Con@ctivity 3.0)

Prerequisite:

- Home WiFi network
- WiFi-enabled Miele cooktop

- Connect the ventilation hood and cooktop to your home WiFi network (see “Setting up Miele@home”).

The Con@ctivity function will be activated automatically.

Con@ctivity via a direct WiFi connection (Con@ctivity 3.0)

Prerequisite:

- WiFi enabled Miele cooktop

If you do not have a home network, you can establish a direct connection between the cooktop and the ventilation hood.

- Switch the ventilation hood off.

- Press and hold the + control.

- Press the – control at the same time.

2 will light up constantly, **3** will flash on and off.

The ventilation hood will be ready for connection in the next 2 minutes.

Before using for the first time

- Start the WiFi connection on the cooktop. For more details, see the cooktop operating instructions.

When successfully connected, **2** and **3** will light up constantly.

- Quit connection mode on the ventilation hood by pressing the delayed shutdown control **5** .

Con@ctivity has now been activated.

With a direct WiFi connection, it is not possible to connect the cooktop and the ventilation hood to a home network. Should this be required at a later date, the direct WiFi connection between the cooktop and the ventilation hood must be disconnected first (see “Signing out of WiFi”).

Reattempting the connection

If it is not possible to connect, **2** and **3** flash or the ventilation hood cancels the process.

- Disconnect the connection to the ventilation hood (see “Signing out of WiFi”) and to the cooktop.
- Attempt to make the connection again.

Operation (Automatic mode)

When Con@ctivity is active, the ventilation hood always operates in automatic mode (see “Before using for the first time – Setting up Con@ctivity”).

If you wish to operate the ventilation hood manually; see “Operation (Manual mode) – Cooking without Con@ctivity”.

Examples for fan levels **1** to **B**

Cooking with Con@ctivity (Automatic mode)

- Turn on a burner to the desired power setting.

The ventilation hood lighting will come on.

- Pull out the canopy.

The fan will come on at power level **2**.

The ventilation hood selects the power level automatically during cooking.

This level is determined by the total output of the cooktop, i.e., the number of burners in operation and the power levels selected.

- If you select a higher power level on the cooktop or switch on multiple burners, the ventilation hood will switch to a higher fan level.
- If you select a lower power level on the cooktop or turn off a burner, the ventilation hood will accordingly switch to a lower fan level.

Reaction time

Changing the power setting on the cooktop does not lead to an immediate increase or decrease in cooking vapors. For this reason, the hood reacts with a slight delay.

Delays can also result from the fact that the cooktop transmits the information to the hood in intervals.

The reaction time can vary from a few seconds to a couple of minutes.

Operation (Automatic mode)

Cooking process

- For example, you switch on a burner at the highest power level to heat cookware for frying. After approx. 10 seconds to 4 minutes, you then reduce the power level (60 seconds to 5 minutes for a HiLight cooktop).

The ventilation hood recognizes a cooking process.

The ventilation hood turns itself on and when the cooktop power level has been reduced, the ventilation hood switches to power level 3 and remains at that level for approx. 5 minutes.

After this, the blower level is once again determined by the Con@ctivity function.

You can also manually select a different blower level before then.

Switching off

- Turn off all burners.

Over the next few minutes, the ventilation hood blower setting will decrease one level at a time until the hood eventually turns off.

This helps to neutralize any lingering vapors and odors in the air.

- From the Booster setting, the blower switches immediately to level 3.
- From level 3, it will switch to level 2 after approx. 1 minute.
- From level 2, it will switch to level 1 after 2 minutes.
- After 2 minutes at level 1, the blower automatically turns off.
- After another 30 seconds, the overhead lighting turns off.

The cooking process is then finished.

If the canopy remains pulled out, the ventilation hood will be switched on automatically the next time the cooktop is switched on:

The fan switches on a few seconds after the cooktop switches on, initially at level **2**, before immediately changing to level **1**. Operation then continues automatically.

Temporarily exiting Automatic mode

To temporarily exit Automatic mode when cooking:

- Manually select a different blower level; or
- Manually turn the ventilation hood off; or
- Activate the delayed shutdown function  on the ventilation hood. The blower will switch itself off after the selected run-on time, and the lighting will remain on.

The ventilation hood functions are now operated manually (see “Operation (Manual mode)”).

Resuming Automatic mode

The ventilation hood resumes Automatic mode:

- If the ventilation hood has not been used for a period of approx. 5 minutes after the manual selection of a blower level; or
- If the manually selected blower level once again matches the automatic setting; or
- The ventilation hood blower and the cooktop have been switched off for at least 30 seconds. Automatic mode will resume next time the cooktop is switched on.

You can also operate the ventilation hood manually for a complete cooking process.

- To do so, switch the ventilation hood blower on **before** the cooktop.

If the ventilation hood and the cooktop have been switched off for at least 30 seconds after cooking, Automatic mode will resume next time the cooktop is switched on.

Operation (Manual mode)

Cooking without Con@ctivity (Manual mode)

The ventilation hood can be operated manually if:

- The Con@ctivity function is not activated.
- You have temporarily deactivated the Con@ctivity function (see “Operation (Automatic mode) – Temporarily exiting Automatic mode”).

Turning on the fan

Switch the fan on as soon as you start cooking. This is to ensure that vapors are captured right from the start.

- Pull out the canopy. To ensure optimum extraction and a low noise level, pull the canopy all the way out.

The fan switches on at power level **2**.

Selecting the power level

Power levels **1** to **3** are available for light to heavy cooking vapors and odors.

For strong vapors and odors that are temporarily produced when cooking, e.g., during searing, select the **B** Booster setting.

- Select the power level you want by pressing the – or + control.

Reducing power down from the Booster setting

If power management is activated (default setting), the blower automatically switches back to level **3** after 5 minutes.

Selecting the delayed shutdown time

It is advisable to run the blower for a few minutes after cooking has finished. This helps to neutralize any lingering vapors and odors in the air.

It also reduces the risk of odors and residues accumulating in the ventilation hood.

The delayed shutdown function enables the blower to continue running for a pre-determined time before switching itself off automatically.

- After you have finished cooking, press the delayed shutdown control $\overset{5}{\text{L}}^{15}$ while the blower is still running.

- Once: blower turns off after 5 minutes (**5** lights up).
- Twice: blower turns off after 15 minutes (**15** lights up).

- If you touch the delayed shutdown control  again, the blower will remain switched on ( will go out).

Turning off the fan

- Push in the canopy.

The next time the canopy is pulled out, the fan will operate at power level 2 again.

- Or switch the fan off with the On/Off control .

The  symbol will go out.

Dimming/switching the cooktop lighting on/off

- You can turn the cooktop lighting on and off by pulling out the canopy and pushing it in again or by pressing the lighting control .

The lighting will switch on at maximum brightness.

- With the lighting switched on, press and hold the lighting  control. The brightness will gradually dim until the control is released.
- To increase the brightness, press and hold the lighting  control again until the desired level has been reached and then release it.

Power management

The ventilation hood is equipped with a power management system. Power management helps to save energy. It ensures that the blower power level is reduced automatically and that the lighting is switched off.

- If the booster level is selected, the blower automatically switches to level 3 after 5 minutes.
- If the blower is set to level 3, 2, or 1, it switches back one blower setting after 2 hours and then in 30-minute intervals until the blower eventually switches off.
- The overhead lighting will switch off automatically after 12 hours.

You can deactivate power management.

Keep in mind that this may increase energy consumption.

Operation (Manual mode)

Activating/deactivating power management

- Switch off the blower and the lighting.
- Press the delayed shutdown control  for approx. 10 seconds until the **1** indicator appears in the blower level display.
- Then press, in turn:
 - the lighting control ,
 - the — control, and then
 - the lighting control .

When power management is turned on, the **1** and **B** indicators will be continuously lit.

When it is turned off, the **1** and **B** indicators will flash.

- Press the — control to deactivate power management.

The **1** and **B** indicators will flash.

- Press the + control to activate power management.

The **1** and **B** indicators will be continuously lit.

- Confirm the setting by pressing the delayed shutdown control .

All the indicator lights will go out.

If you do not confirm the new setting within 4 minutes, the ventilation hood will revert to the previous setting.

Safety shut-off

If power management has been deactivated, the ventilation hood will switch itself off automatically after 12 hours if it has been left on (blower and overhead lighting).

- To switch it back on, press the On/Off  control or the lighting control .

This hood operates in a very efficient and energy-saving manner. The following will help you to save even more energy when using it:

- Ensure that there is sufficient ventilation in the kitchen when cooking. If there is insufficient air flow during extraction mode, the hood cannot operate efficiently, causing increased operating noise levels.
- Always cook with the lowest possible setting. This produces fewer cooking vapors so that you can use a lower hood power level and therefore benefit from reduced energy consumption.
- Clean or change the filters at regular intervals. Heavily soiled filters reduce performance, increase the risk of fire and are unhygienic.
- Use the Con@ctivity function. The ventilation hood will switch on and off automatically. The ventilation hood will select the optimum power level for the cooking you are doing, which ensures low energy consumption.
- If you are operating the ventilation hood manually, please note the following:
 - Check the power level selected on the ventilation hood. A low power level is usually sufficient. Only use the Booster setting when necessary.
 - When a large volume of cooking vapors are being produced, switch to a high power level in good time. This is more efficient than operating the hood for longer to try to capture cooking vapors that have already been distributed throughout the kitchen.
 - Make sure that you switch off the hood after use. If cooking vapors and odors still need to be removed from the kitchen air after cooking, use the delayed shutdown function. The blower will switch off automatically after the selected delayed shutdown time.

Changing settings

Adjusting the grease filter filter saturation indicator

The filter saturation indicator can be set to suit the customer's cooking habits.

The factory default setting is a cleaning interval of 30 hours.

- Select a shorter interval of 20 hours if food is fried regularly.
- A shorter cleaning interval is also recommended if the customer only cooks occasionally. This will prevent grease buildup from hardening and making cleaning more difficult.
- Select a longer cleaning interval of 40 or 50 hours if the customer uses very little fat when cooking.

- Switch off the blower and the lighting.
- Press the delayed shutdown control  and the filter saturation control  at the same time.

The grease filter symbol  and one of the blower power level indicators will flash.

The indicators **1** to **B** show the current time setting:

1	20 hours
2	30 hours
3	40 hours
B	50 hours

- Press the **—** control for a shorter duration, or **+** for a longer duration.
- Confirm the selection by pressing the filter saturation indicator .

All the indicator lights will go out.

If the new setting is not confirmed within 4 minutes, the ventilation hood will revert to the previous setting.

Adjusting or deactivating the filter saturation indicator for the charcoal filter

Charcoal filters are needed for recirculation mode.

The filter saturation indicator can be set to suit the customer's cooking habits.

It has to be deactivated for extraction mode.

The factory default setting is an interval of 180 hours.

- Switch off the blower and the lighting.
- Press the “+” button and the operating-hours button   at the same time.

The charcoal filter symbol  and one of the blower power level indicators will flash.

The indicators **1** to **B** show the current time setting:

Indicator 1	120 hours
Indicator 2	180 hours
Indicator 3	240 hours
B	Deactivated

- Press the “+” or “-” button to select the required duration.
- Confirm the selection by pressing the operating-hours button  .

All the indicator lights will go out.

If the selection is not confirmed within 4 minutes, the system will revert to the previous setting.

Deactivating power management

Keep in mind that this may increase energy consumption.

Activating/deactivating power management

- Switch off the blower and the lighting.
- Press the delayed shutdown control  for approx. 10 seconds until the **1** indicator appears in the blower level display.
- Then press, in turn:
 - the lighting control ,
 - the — control, and then
 - the lighting control .

When power management is turned on, the **1** and **B** indicators will be continuously lit.

When it is turned off, the **1** and **B** indicators will flash.

- Press the — control to deactivate power management.

The **1** and **B** indicators will flash.

- Press the + control to activate power management.

The **1** and **B** indicators will be continuously lit.

- Confirm the setting by pressing the delayed shutdown control .

All the indicator lights will go out.

If you do not confirm the new setting within 4 minutes, the ventilation hood will revert to the previous setting.

Cleaning and care

 Before proceeding with any maintenance or cleaning task, the ventilation hood must be disconnected from the power supply, see “IMPORTANT SAFETY INSTRUCTIONS”.

Stainless steel housing

General information

Unsuitable cleaning agents can damage the surfaces and control elements.

Do not use any cleaning agents containing soda, acid, chloride, or solvent.

Do not use any abrasive cleaning agents, e.g., powder cleaners or cream cleaners and abrasive sponges, as well as pot scourers or sponges which have been used previously with abrasive cleaning agents

 Moisture in the ventilation hood can cause damage.
Make sure that water does not get into the ventilation hood.

- Clean all surfaces and control buttons using a small amount of warm water and liquid dish soap. Apply with a sponge cloth.
- After cleaning, wipe the surfaces dry using a soft cloth.

Important information for appliances with stainless steel surfaces

This information does not apply to the control buttons.

Stainless steel surfaces can be cleaned with a non-abrasive cleaning agent designed specifically for use on stainless steel.

To prevent the surfaces from quickly becoming dirty again, we recommend treating them with a stainless steel care product (available from Miele).

Important information for the controls

If soiling is not removed promptly, it could cause the control elements to alter or discolor.
Remove soiling immediately.

The surface of the control elements can become damaged if they are cleaned using stainless steel cleaning agents.
Do not use stainless steel cleaning agents on the control elements.

Special instructions for glass surfaces

- Glass surfaces can be cleaned using a cleaner specifically for use on glass.

- You can clean the rear section of the deflector plate from the inside. Remove the grease filters to do this.

Filter saturation indicator

The ventilation hood registers the length of time it has been operated.

Filter saturation indicators show when the filters need to be cleaned or changed by lighting up the grease filter symbol  or charcoal filter symbol .

You can set the filter saturation indicator to suit the type of cooking you do (see “Changing settings”).

Checking the filter saturation indicator

Before the set operating time has run out, you can check what percentage of the time has elapsed.

- Press the On/Off control  to turn the blower on.
- Press and hold the filter saturation indicator  .
- Once, to check the grease filter operating time. The grease filter symbol  lights up.
- Twice, to check the charcoal filter operating time. The charcoal filter symbol  lights up.

One or more of the blower power level indicators will flash simultaneously.

The number of flashing indicators shows the elapsed operating time as a percentage.

Indicator 1	25%
Indicators 1 and 2	50%
Indicators 1 to 3	75%
Indicators 1 to B	100%

Cleaning and care

The number of elapsed operating hours remains stored in memory when the ventilation hood is turned off or if there is a power outage.

Grease filters

⚠ Risk of fire

Oversaturated grease filters are a fire hazard.

Clean the grease filters at regular intervals.

The re-usable metal grease filters in the appliance remove solid particles (grease, dust, etc.) from the kitchen vapors, preventing soiling of the ventilation hood.

The grease filters must be cleaned at regular intervals.

Heavily soiled grease filters hinder air extraction and will lead to increased levels of soiling in the ventilation hood and in the kitchen.

Cleaning intervals

Accumulated grease solidifies over a longer period of time and makes cleaning more difficult. The grease filters should therefore be cleaned every 3 to 4 weeks.

The filter saturation indicator reminds you to regularly clean the grease filters by illuminating the grease filter symbol .

Removing the grease filters

⚠ When handling the grease filter, be careful not to drop it.

This can result in damage to the filter and the cooktop below.

Make sure you hold the filter securely at all times when handling it.

- Remove the grease filters from the slots on the front of the housing.

Cleaning the grease filters by hand

- Clean the filters with a soft nylon brush in a mild solution of hot water and dish soap. Do not use undiluted dish soap.

Unsuitable cleaning agents

Unsuitable cleaners can cause damage to the filter surfaces if used regularly. Do not use any of the following:

- Lime removers
- Abrasive powders or abrasive liquids
- Aggressive all-purpose cleaners and degreaser sprays
- Oven sprays

Cleaning the grease filters in a dishwasher

- Place the grease filters upright or slightly inclined in the lower basket. Ensure the spray arm is not obstructed.
- Use a commonly available household dishwashing detergent.
- In a Miele dishwasher use the “Normal” program.

Depending on the detergent used, cleaning the filters in a dishwasher may cause the inside filter surfaces to become discolored. However, this will not affect the functioning of the grease filters in any way.

After cleaning

- After cleaning, leave the filters on an absorbent surface to dry.
- When removing the filters for cleaning, also clean off any accessible oil or fat buildup from the housing. Doing so will prevent a fire hazard.
- Refit the grease filters.

Resetting the filter saturation indicator for the grease filters

Once cleaning is complete, the filter saturation indicator must be reset.

- While the blower is turned on, press the filter saturation indicator  for approx. 3 seconds until **1** is the only indicator flashing.

The grease filter symbol  goes out.

When cleaning the grease filters before the full operating time has elapsed:

- Press the filter saturation indicator  for approx. 6 seconds until **1** is the only indicator flashing.

Replacing the grease filter

Regular usage and cleaning can cause the filter surfaces to become worn.

If you identify any damage, replace the grease filters.

Grease filters are available to order via Miele Customer Service (see end of these operating instructions for contact details) or from your Miele dealer.

OdorFree Charcoal Filter

With recirculation mode, two charcoal filters must be fitted in addition to the grease filters. These are designed to absorb cooking odors.

Charcoal filters are available to order via the Miele Web Store (see end of this booklet for contact details), or from your Miele dealer.

The charcoal filters are listed under “Technical data” at the back of this booklet.

Cleaning and care

Installing/replacing the charcoal filters

The slots for the charcoal filters are located above the grease filters.

- Remove the lid. It is held in place by magnets.
- Take the charcoal filters out of their packaging.
- Insert the charcoal filters into the slots as far as they will go.
- Replace the lid.

When to change the OdorFree Charcoal Filter

Replace the charcoal filters when they no longer absorb kitchen odors effectively, and at least every 6 months.

The filter saturation indicator reminds you to regularly replace the charcoal filters by illuminating the charcoal filter symbol .

Resetting the filter saturation indicator for the charcoal filters

After changing the charcoal filters, the filter saturation indicator must be reset.

- To do this, press the filter saturation indicator  twice with the blower turned on and hold it for approx. 3 seconds until **1** is the only indicator flashing.

The charcoal filter symbol  will go out.

If you want to replace the charcoal filters **before** the full operating time elapses:

- Press the filter saturation indicator  twice and hold it for approx. 6 seconds until **1** is the only indicator flashing.

Disposing of charcoal filters

- Used charcoal filters can be disposed of with normal household waste.

Reactivatable charcoal filters

Reactivatable charcoal filters are available for this ventilation hood. They can be used several times after being reactivated in the oven.

Please follow the operating instructions supplied with the filters.

- Open the tab using a tool such as a screwdriver. Take hold of the tab to pull the charcoal filter out.
- Insert the charcoal filters into the slots as far as they will go.
- Replace the lid.

Customer Service

Information to help you rectify faults yourself and about Miele spare parts can be found at www.miele.com/service.

Contact in the event of a fault

In the event of a fault which you cannot remedy yourself, please contact your Miele dealer or Miele Customer Service.

You can book a Miele Service Call online at www.miele.com/service.

Contact information for Miele Customer Service can be found at the end of this document.

Please quote the model identifier and serial number of your appliance (SN) when contacting Miele Customer Service. Both pieces of information can be found on the data plate.

Location of the data plate

The data plate is located on the housing of the ventilation hood and is visible when the cover for the charcoal filters is removed.

Appliance warranty and product registration

You can register your product and/or view the manufacturer's warranty terms and conditions for Miele appliances and vacuum cleaners at www.mieleusa.com.

Before installation

 Before installation, it is important to read the information contained in this chapter and in the “IMPORTANT SAFETY INSTRUCTIONS” chapter.

Information is subject to change. Please refer to our website to obtain the most current product specification, technical & warranty information.

Installation recommendations

- To achieve optimum vapor extraction, the hood must be centered over the cooktop, not to the side.
- The cooktop should be no wider than the hood. Preferably, it should be narrower for better extraction.
- The mounting area must be easily accessible. The ventilation hood should be easy to reach and disassemble in case a service call is necessary. This should be taken into consideration when planning the position of cabinetry, shelves, ceilings or decorative elements in the vicinity of the ventilation hood.

Installation materials

1 non-return flap

for installation in the exhaust vent on the motor (not needed for recirculation mode)

2 mounting brackets

for installation in the cabinet

1 drilling template

1 spacer strip

for concealing the gap between the rear of the appliance and the wall

08165470

11579140

11889020

11597850

Installation

6 screws, 4 x 15 mm

4 M4 x 16 mm screws

Installation plan

See the installation plan for details of the individual steps involved in the installation of this appliance.

Leave these instructions with the appliance for the consumer/user.

Installation materials for recirculation mode

You need the following optional accessories for recirculation mode.

DUU 15x installation kit

contains a directional unit socket, hose, and hose clips (DUU 150 for the top of the cabinet or DUU 151 for the sides or front of the cabinet).

01056271

Further installation materials

(optional accessories)

07602740

dna3enle

da5207

DASL 38 trims

You will need the trims if you wish to replace an appliance from the DA 35xx or DA 36xx series with this ventilation hood and you want to keep using the existing cabinet. The trims allow you to adjust the height of the cabinet sides.

DUU 150 151

da5209

DASB 90 filler panel

You can use the filler panel on the rear of the ventilation hood to level out the height in relation to a backsplash, for example. The filler panel can also be mounted with the spacer strip.

Appliance dimensions

DAS 4940 in a 35 ⁷/₁₆" (900 mm) wide cabinet.

The drawing is not to scale

- ① The mounting brackets are designed for cabinets with sides that are between $\frac{5}{8}$ " and $\frac{3}{4}$ " (16 and 19 mm) thick.
- ② The exhaust duct can also be connected at the back.
- ③ Cut-out for vented mode or recirculation mode with DUU 150 conversion kit
- ④ The upper cabinet can be fitted with a partition after installation. Slots for the grease filters and charcoal filters (for recirculation mode) must remain accessible.

Installation

Safety distance (S) between cooktop and ventilation hood

Risk of heat damage.

The rising heat generated by a gas cooktop may damage the ventilation hood. Installing this ventilation hood over a gas cooktop is not permitted.

When planning the installation distance between the cooking appliance and the bottom of the ventilation hood, the information provided by the cooking appliance manufacturer must be taken into account.

Unless a greater distance is specified by the cooking appliance manufacturer, the minimum safety distances indicated below must be ensured.

See “IMORTANT SAFETY INSTRUCTIONS” for further information.

Cooking appliance	Minimum distance S
Electric cooktop	24" (610 mm)
Electric grill, electric fryer	26" (660 mm)
Gas cooktop	Not possible

Air venting

WARNING: Danger of toxic fumes. Gas cooking appliances release carbon monoxide that can be harmful or fatal if inhaled.

To reduce the risk of fire and to properly exhaust air, the exhaust gases extracted by the hood should be vented outside of the building only. Do not vent exhaust air into spaces within walls or ceilings or in attics, crawl spaces or garages.

To reduce the risk of fire, only use metal ductwork.

Please read and follow the "IMPORTANT SAFETY INSTRUCTIONS" to reduce the risk of personal injury. Follow all local building codes when installing the hood.

Only use smooth pipes or flexible ducting made from approved non-flammable materials for ducting.

To achieve the most efficient air throughput with the lowest noise levels, please note the following:

- The diameter of the vent ducting must not be smaller than the cross-section of the vent collar (see "Appliance dimensions"). This applies in particular when using flat ducting.
- The ducting should be as short and straight as possible.
- Only use wide radius bends.
- The ducting must not be kinked or compressed.
- All connections must be strong and airtight.

- If the ducting has flaps, these must be opened whenever the ventilation hood is switched on.

Any constriction of the air throughput will reduce extraction performance and increase operating noise.

Ventilation stack

If the exhaust air is to be ducted into a flue, the ducting must be directed in the flow direction of the flue.

If the flue is used by several ventilation units, the cross-section of the flue must be large enough.

Non-return flap

- Use a non-return flap in the vent system.

A non-return flap ensures that when the ventilation hood is not in operation, the duct is closed to prevent unwanted exchange of room air and outside air.

If the exhaust is ducted through an outside wall, a Miele wall vent or roof vent (available as an optional accessory) is recommended. Both of these have a built-in non-return flap.

If the on-site vent system does not have a non-return flap, one is supplied with the ventilation hood.

The non-return flap is installed in the exhaust socket of the fan.

Installation

Condensate

If the ducting is to run through cool rooms or ceiling space, for example, the significant variations in temperature between the different areas can cause condensate to form. Insulate the ducting to reduce temperature variations.

If the ducting is to be laid horizontally, it must be laid with a downwards sloping gradient of at least $\frac{3}{8}$ " (1 cm) per meter. This is to ensure that condensate cannot drain back into the ventilation hood.

In addition to insulating the ducting, it is advisable to also install a condensate trap for collecting and evaporating any potential condensate.

Condensate traps for 5" (125 mm) or 6" (150 mm) diameter ducting are available as optional accessories.

When installing a condensate trap, ensure that it is positioned vertically and as closely as possible to the ventilation hood above the exhaust vent. The arrow on the casing indicates the direction of airflow.

Miele will not accept warranty claims for any functional defects or damage caused by inadequate ducting.

Reducing Collar

(optional accessory)

If you would like to reduce the environmental impact of your ventilation system by limiting the CFM output the Reducing Collar can be installed. It reduces the air flow to less than 400 CFM. Check local building codes for max. CFM requirements.

- Push the Reducing Collar on the exhaust port of the blower.
- Push the exhaust hose over it.
- Secure both with a hose clamp.

Electrical connection

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

All electrical work should be performed by a qualified electrician in strict accordance with national regulations (for USA: ANSI-NFPA 70) and local safety regulations.

Installation, repairs and other work by unqualified persons could be dangerous.

Ensure that power to the appliance is OFF while installation or repair work is performed.

Verify that the voltage, load and circuit rating information found on the data plate (see "Technical Service"), match the household electrical supply before installing the hood.

Use only with ventilation hood cord-connection kits that have been investigated and found acceptable for use with this model hood.

If there is any question concerning the electrical connection of this appliance to your power supply, please consult a licensed electrician or call Miele's Technical Service Department.

WARNING: THIS APPLIANCE MUST BE GROUNDED

Grounding Instructions

WARNING - Improper grounding can result in a risk of electric shock.

This appliance must be grounded. In the event of an electrical short circuit, grounding reduces the risk of electric shock by providing a path of least resistance. This appliance is equipped with a cord having a grounding wire with a grounding plug.

If there is any doubt, have the electrical system of the house checked by a qualified electrician.

Do not use an extension cord. If the power supply cord is too short, have a qualified electrician install an outlet near the appliance.

- The plug must be plugged into an outlet that is properly installed and grounded.

WARNING - Grounding instructions (Canada)

The grounding-type attachment plug shall be connected to a grounding-type receptacle installed in accordance with CSA C22.1-12, Canadian Electrical Code, Part I.

Technical data

Blower motor	350 W
Overhead lighting	3 W
Total rated load	353 W
Supply voltage, frequency	120 V AC, 60 Hz
Fuse rating	15 A
Power-cord length	2.5 ft (0.75 m)
Weight	39.7 lbs (18 kg)

WiFi module

Frequency range	2.400–2.4835 GHz
Maximum transmission power	< 100 mW

Optional accessories for recirculation mode

For recirculation mode, installation kit DUU 150 or DUU 151 and charcoal filters DKF 31-900 P or DFK 31-R (reactivatable) must be purchased as optional accessories. The packs contain 2 charcoal filters.

WiFi module EK037

FCC ID: 2ACUWEK037

IC: 5669C-EK037

This device complies with Part 15 of the FCC Rules and with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
